

Attentiveness Craft

MAKE A MAGNIFYING GLASS

Cut out two magnifying glass frames, preferably on heavy paper. Place a piece of kitchen plastic wrap between the frames, and staple the frames together. Trim the extra plastic wrap from the outside edges.

Spread a newspaper on a table and place your magnifying glass over a color picture. Put a small drop of water on top of the plastic wrap, and the water drop should magnify the picture underneath in order to see many small colorful dots.

Points to Ponder:

- Give your full concentration to a person or project so that you can learn as much as possible.
- Look closely so that you can see the details you might miss at first glance.
- Attentiveness can help you get the most out of your education.

Additional Supplies:

Plastic wrap, scissors, stapler, water, newspaper
